

PRECISION SPINE CARE

DR. RODERICK KING

Board-Certified in Anesthesiology
Fellowship Trained in Interventional Pain Medicine

We are excited to announce that Dr. Roderick King Jr. will begin seeing patients at our Lufkin location late Summer, early Fall 2025. Dr. King is board-certified in Anesthesiology and fellowship-trained in Interventional Pain Medicine.

A native of Delaware, Dr. King developed an early passion for science and medicine, which led him to graduate summa cum laude with a Bachelor of Science in Biology from Delaware State University. He went on to earn his Doctor of Medicine from Stanford University in 2020, where he cultivated a deep interest in both anesthesiology and the multidisciplinary approach to managing chronic pain.

Following medical school, Dr. King completed his residency in Anesthesiology at the Mayo Clinic in Rochester, Minnesota—one of the nation's premier academic medical centers. He then pursued advanced fellowship training in Pain Medicine at Harvard's Brigham and Women's Hospital, where he trained under experts across multiple specialties, including Anesthesiology, Psychiatry, Physiatry, Palliative Medicine, and Neurology. This comprehensive, cross-disciplinary training provided him with a uniquely holistic perspective on pain management.

In addition to his clinical work, Dr. King is committed to advancing the field of medicine through research and education. He has co-authored several peer-reviewed publications in Anesthesiology and Pain Medicine, highlighting his dedication to evidence-based practice and continual improvement in patient care.

Dr. King now brings his expertise to Precision Spine Care, where he is focused on restoring function and improving quality of life through minimally invasive procedures and integrative treatment strategies tailored to each patient's needs.

We're confident Dr. King will be a valuable addition to the Lufkin community and continue Precision Spine Care's mission of delivering compassionate, high-quality care. His goal is to help patients return to their daily lives with less pain and renewed confidence.
